Comment on "A method for detecting ionospheric disturbances and estimating their propagation speed and direction using a large GPS network" by James L. Garrison et al.

M. Hernández-Pajares,[1] J. M. Juan,[1] and J. Sanz[1]

Received 15 January 2008; revised 3 June 2008; accepted 14 August 2008; published 18 September 2008.

Citation: Hernández-Pajares, M., J. M. Juan, and J. Sanz (2008), Comment on ''A method for detecting ionospheric disturbances and estimating their propagation speed and direction using a large GPS network'' by James L. Garrison et al., *Radio Sci.*, *43*, RS5003, doi:10.1029/2008RS003830.

[1] The method presented by *Garrison et al.* [2007] is a simplification of the method presented in our uncited paper [*Hernández-Pajares et al.*, 2006]. In this paper we extended the work (model and computations) presented by *Orus et al.* [2003] (cited in the work of *Hernández-Pajares et al.* [2006]), over four worldwide local networks, processed during 1 year or more, filtering out unrelated medium-scale traveling ionospheric disturbance events and using an exact analytical correction for the Doppler term (not incorporated by *Garrison et al.* [2007]).
